I. OVERVIEW

Barito Bahalap Agency (BBA) is an independent parent organization in Palangka Raya, Central Kalimantan, that oversees two separate business units: Barito Bahalap Tech (technology) and Barito Bahalap Media (strategic communications).

1.1. Company Summary

Description	Information
Organization name	Barito Bahalap Agency (BBA)
Role of BBA	Parent organization: corporate strategy, contracts, finance, legal compliance, risk and reputation management
Business units	Barito Bahalap Tech (BBT), technology and digital infrastructure. Barito Bahalap Media (BBM), media and strategic communications
Founded	2026
Location	Palangka Raya, Central Kalimantan, Indonesia
President Director	Basilius Tengang, S.Kom.
Client segments	Corporations, state-owned and regional-owned enterprises (BUMN/BUMD), government agencies, organizations and institutions, as well as public figures and political figures
Work model	Contract-based, with a written scope of work, on project and retainer schemes

1.2. About BBA

BBA is built on one understanding: the need for digital infrastructure and the need for public communications are two functions that differ in competencies, risks, and governance. For this reason, BBA does not run the two as a single blended service, but instead oversees two business units with separate identities, teams, and operational lines.

BBA's role at the holding level is limited to cross-unit functions: corporate strategy, contracts and business relations, finance, legal compliance, and risk and reputation management. BBA does not interfere in technical decisions at BBT or editorial decisions at BBM.

II. VISION & MISSION

2.1. Vision

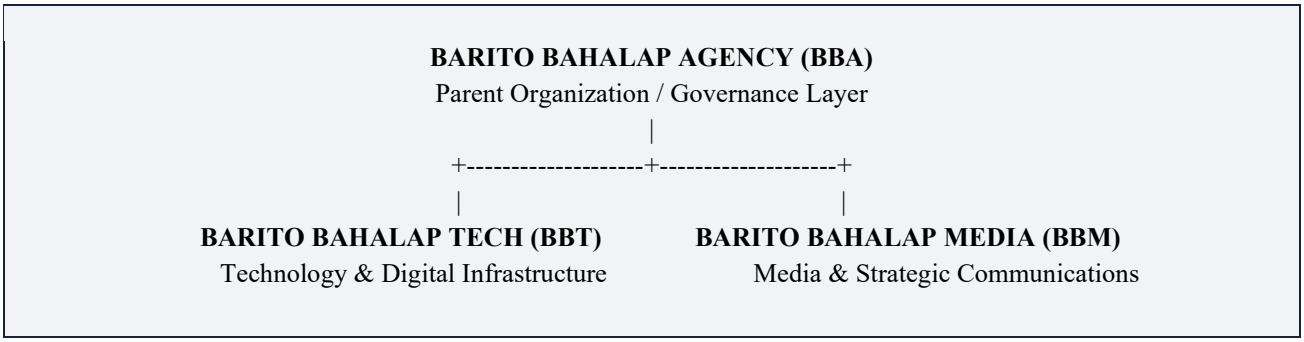

To be a trusted partner in building corporate-scale digital infrastructure and public communication strategies with strong impact for agencies, companies, organizations, and the public.

2.2. Mission

1. Develop software, information systems, and digital infrastructure that are stable, secure, and suited to the operational needs of medium- to large-scale organizations.
2. Provide strategic communications services, media management, and content production with preserved editorial independence and in accordance with applicable legal provisions.
3. Apply clear corporate governance, including a firm operational separation between the technology unit and the media unit.
4. Build capabilities gradually and in a measured way, and offer only services whose quality and capacity can be accounted for.

III. BUSINESS ARCHITECTURE

BBT and BBM belong to one business group, but operate as two functionally separate units. We call this principle Strict Dual-Brand Governance, and it has been applied since BBA was formed, not as an adjustment made after the organization grew.

3.1. Two Separate Units

This separation is a strategic architecture that underlies the whole way BBA operates. Three main reasons underlie this decision:

1. **Different risk profiles.** BBT faces technical and operational risks (system security, application reliability), while BBM faces editorial and reputational risks (news accuracy, communication neutrality). Mixing both risk profiles in a single operating unit would make mitigating each more difficult.
2. **Different client profiles.** Technology clients generally assess vendors based on technical capability and system reliability, whereas communications clients assess them based on editorial independence and the credibility of public messaging. A single positioning would weaken BBA's credibility in both segments.
3. **Prevention of conflicts of interest.** The separation prevents situations in which technology clients and communications clients, who may come from sectors or interests that overlap, have doubts about the confidentiality of their data or the independence of the services they receive.

This approach is in line with common practice among professional services groups that separate business lines with potential conflicts of interest.

3.2. Operational Firewall

The separation is implemented across the following seven dimensions. For your procurement, legal, and compliance departments, this structure can be audited and explained.

Dimension	Barito Bahalap Tech (BBT)	Barito Bahalap Media (BBM)
Service focus	Technology and digital infrastructure	Media and strategic communications
Brand identity	Own name, logo, and channels	Own name, logo, and channels
Operating team	Separate technical team	Separate editorial and creative team
Client account management	BBT account line	BBM account line
Client data and information	Isolated from BBM	Isolated from BBT
Decision authority	Tech Delivery Lead (technical)	Media Creative Lead (editorial)
Main Output	Systems, applications, dashboards, automation	Content, publications, institutional communications
Holding oversight	Contracts, finance, legal, risk	Contracts, finance, legal, risk

Cross-unit assignments, where needed due to capacity constraints, are carried out with access restricted on a need-to-know basis. One unit's client information is not shared with the other unit without the written consent of the client concerned. The President Director does not act as the day-to-day editorial decision-maker for BBM.

IV. Barito Bahalap Tech (BBT)

BBT designs, develops, and maintains digital systems for organizations' operational needs. BBT is positioned as a long-term digital infrastructure partner, not a one-off website-building service provider.

4.1. Services

Services	Outcome for clients
Enterprise software and custom applications	Systems built to fit the organization's workflow
Analytics and operational monitoring dashboards	Centralized operational data that is easy for leadership to read
Business process automation	Reporting and recurring workflows run automatically
User interface and user experience (UI/UX) design	Systems that are easy to use and consistent
Ongoing technical support and maintenance	Systems remain reliable after launch

4.2. Client Segments

- State-owned and regional-owned enterprises (BUMN/BUMD) and government agencies that need information systems or internal operational dashboards.
- Corporations and mid-sized companies that need process automation, internal systems, or cross-platform integration.
- Organizations and institutions that need custom applications or digital platforms.

4.3. Delivery Model

Requirements identification, architecture design, development, testing (QA), implementation, and handover. Each stage has a written deliverable that the client can review.

4.4. Retainer Model

For systems that operate continuously, a retainer gives the client maintenance, fixes, and further development without a new procurement process each time a change is needed. The scope and service level (SLA) are drawn up together with the client in a written agreement.

4.5. BBT Portfolio and Track Record

The following three systems have been developed by BBT and are running actively under ongoing retainer schemes.

Project	Client	Need	BBT Solution	Scope and status
RSO2 Telkom Dashboard	PT Telkom Indonesia (Regional 3), Surabaya	Centralized monitoring and management of operational information	Analytics and operational dashboard tailored to internal workflows and data, with automated reporting	Design, development, maintenance. Retainer actively running
E-Palugada	E-Palugada, Kasongan, Central Kalimantan	National delivery platforms have limited reach in the Kasongan area	Web-based delivery platform tailored to the local market	Design and development. Retainer actively running
Official Website AMPI Kalteng	AMPI Regional Leadership Council (DPD),	Centralized platform for organizational information, programs, publications, and public interaction	All-in-one web platform: organizational information, programs, news, documents, media, partnership	Design and development. Retainer actively running

Project	Client	Need	BBT Solution	Scope and status
	Central Kalimantan Province		registration, and submission of aspirations	

V. Barito Bahalap Media (BBM)

BBM handles strategic communications, content production, and publication management for organizations and institutions. BBM is positioned as a professional communications operation, not merely a social media manager. BBM is currently at an early stage of operational development, and its portfolio will be presented separately as its initial projects are completed.

5.1. Services

- Strategic communications and institutional message planning.
- Media relations.
- Content operations and copywriting.
- Public communications and corporate or institutional communications.
- Editorial services and publication management.
- Multimedia production, including photography and videography.
- Social media strategy and management.

5.2. Editorial Independence

Decisions on content, narrative, and publication schedule rest with BBM's Media Creative Lead, and operate independently of the holding function and of BBT's commercial interests. For activities that constitute press publishing, BBM observes Law Number 40 of 1999 on the Press and the journalistic code of ethics, including the principles of accuracy, balance, and verification of information before publication.

VI. GOVERNANCE

Area	Application
Contracts	Every engagement is based on a written agreement that sets out scope, responsibilities, duration, and dispute resolution. Contracts are managed at the holding level so that standards are consistent across both units
Client confidentiality	Data and information are accessed only by personnel directly involved. Applies to external parties as well as between BBA's internal units
Data isolation	Working documents and client data are stored separately between BBT and BBM. Cross-unit access requires explicit authorization
Editorial independence	BBM's editorial decisions are independent of BBT's commercial interests and of day-to-day intervention by the Founder/Director
Legal compliance	BBM observes Law Number 40 of 1999 on the Press for press publishing activities. BBT observes the applicable provisions on information system development and personal data protection
Reputation management	Managed at the holding level through oversight of contractual and legal compliance, without taking over technical or editorial decisions
Conflicts of interest	Prevented through the separation of teams, accounts, and data in accordance with the Operational Firewall

6.1. Working Principles

Principle	Application
Professionalism	Services are carried out according to work standards and the client's specific needs
Confidentiality	Client data is protected through access restrictions and separation between units
Accountability	Every function has clear responsibilities and decision lines
Editorial Independence	BBM's editorial and publication activities are managed independently in accordance with applicable provisions
Compliance	Business activities take into account contractual, legal, regulatory, and reputational risk aspects
Operational Separation	BBT and BBM do not mix identities, data, or operational interests

6.2. How We Work Together

1. **Initial consultation.** The client states their needs, and we determine the relevant unit (BBT or BBM).
2. **Written proposal.** Scope, deliverables, schedule, and costs are presented in a proposal from the relevant unit.
3. **Contract and confidentiality.** The work agreement and confidentiality agreement are signed before work begins.
4. **Execution and handover.** Work proceeds phase by phase with client approval at each deliverable.
5. **Ongoing support.** Maintenance or follow-on services through a retainer scheme if needed.
